Windows protected your PC

Windows SmartScreen prevented an unrecognized app from starting. Running this app might put your PC at risk.

[More info](#)

Don't run

Depending on your operating system the above message may appear. Click on »More info«.

And then click on »Run anyway«.

The operating system may ask you to confirm the action. Click »Yes«. The installation will now begin. Now only follow the prompts – basically, you will need to click few times on “Next” button and “Finish” at the end – there is no much of parameters there.

If you are making installation over the previous version, all the parameters will be preserved, so be free to overwrite old versions – all your settings will stay the same and also data format is always backward compatible.

When finished, you can start using Wise Timetable software. For more information, please look in User Manual (also accessible from the first page on www.wisetimetable.com).
